

WORKSHOP ON WASTE TO WEALTH BY BLUE PLANET ENVIRONMENTAL SOLUTIONS

Recycle it all, no matter how small.

We at JKPS believe that a child who is socially and environmentally responsible is a true citizen and a custodian of the planet. Moving ahead with our vision of preserving environment, the Eco club of JKPS has joined hands with Blue planet Environmental Solutions to recycle the waste paper under the project of Waste to Wealth. Founded in 2017 and headquartered in Singapore, Blue Planet Environmental Solutions is one of Asia's largest waste management companies. This company upcycle, recycle, and repurpose end of life resources using environmentally friendly technologies thereby contributing to a Circular Economy.

To apprise the students with this initiative, a workshop was conducted by Mr. Harinder, one of the volunteers of this company. It turned out to be an interactive session and the students were really curious to know about the different recycled products manufactured from waste paper. The resource person was able to motivate students to participate whole heartedly in this drive through some videos showcasing other programmes which they have successfully conducted in various schools.

The school aims to take up the drive in full swing by engaging the students for collection of waste paper and up-cycling.
