

“Education is the passport to the future, for tomorrow belongs to those who prepare for it today.”

This month the students of Vivekanand Paathshala learnt a lot of new things including Academics and Co-curricular activities. The recreational activities enriched their minds and individual health while enhancing their attention span.

The students learnt about various water resources- the rivers, lakes, ponds, etc. They learnt about the importance of water in our life and how it is necessary for our survival. They also got to learn about the process of water cycle. It was quite informative and the students were told ways in which they can reuse and recycle water to avoid wastage.

Furthermore, enhancing the linguistic skills of children, a session in Grammar and sentence editing was organised for them. The students were given sentences and were facilitated in identifying and rectifying the mistakes present there and were asked to correct them.

A music class was organised for the students as well. It not only helps the children to express their emotions but also helps them to elevate their mood while aiding them to maintain their creativity and keep them motivated.

Aerobics session was organised for the children to keep them physically as well as mentally fit. As we all know that physical health is very much important in a person's life just as his mental health, knowledge etc. It helps them to stay fit and active.

The children were provided with pencils as goodies to motivate them and encourage them to work efficiently and focus on their tasks.

As we all know October is the month with lots of festivals, such as Dussehra, Diwali etc, It was important for the students to learn about the festivals and why they are celebrated. This encourages the children to celebrate the festivals and enjoy the meaning behind their celebration.

An awareness session was held for the students pre-Diwali to make the students understand that we shouldn't burst crackers as it leads to pollution in the environment. This activity helped them understand the ill-effects of the harmful crackers and helped them be a better citizen in the society.
